

Quality Assurance And Quality Management Ppt

Select Download Format:

Typical Quality Systems Two-Stage: 1. Design Stage 2. Production Stage. The design stage involves the product design, development, testing and validation. The production stage involves the manufacturing, distribution and sales of the product. The design stage is the most critical stage of the process, as it determines the quality of the product. The production stage is also important, as it ensures that the product is manufactured to the required quality standards.
